## **MODEL VARIATION FEATURES:**

### **The next generation of hybrid driving**

Introduced for the first time as hybrid, the Corolla delivers a spirited drive through its new innovative self-charging hybrid powertrain. With a completely new approach to design and engineering, the world's best-selling car has it all: a sleek new exterior, a completely refurbished interior, a span of upgraded technology and, probably most important of all, updated safety features. The Corolla is back - and it's better than ever.

### **Designed for the city, built to go further**

Stylish, efficient and comfortable, the new Corolla is a joy to drive whatever your lifestyle. Whether you're driving in the city or cruising along the motorway with an automatic transmission, you'll benefit from the self-charging hybrid powertrain, plus the reliability for which Toyota is renowned.

### **Impressive from the inside out**

The new Corolla is more than just an excellent drive: the comfortable cockpit is designed around your needs, the updated Toyota Safety Sense package makes sure every road user is as safe as possible and the new hybrid powertrain is exhilarating, get from 0 to 100km/h in 11 seconds.

- **Designed to standout**
- **Refined, spacious and comfortable**
- **An icon for the modern age**

Fuel efficiency, low emissions and a satisfying drive

Spirited and responsive in the city, the 1.8L hybrid engine provides a smooth,

relaxed drive - whatever the situation. What's more is you'll never even need to plug it in, because the Corolla is self-charging.

Clever technologies that are easy to use

With features such as voice recognition and connected services, you can make calls, control your music and enjoy a truly connected drive.

## THE NEW CYCLE OF AN EVOLUTION

The new Sedan benefits from the same wide and low stance inherent in the new GA-C platform. However, its own individuality within the Corolla family is reflected by a more prestigious exterior design with all-new front and rear styling.

Its overall length increased by 10 mm, the new Sedan features a 5 mm reduction in front overhang and a 15 mm increase in rear overhang.

The Sedan's overall height and boot lid surface have both been reduced by 20 mm, and its cowl height lowered by 35 mm. In combination with a lowering of front and rear seating hip points by 23 and 9 mm respectively, these height reductions also give the new Sedan a lower center of gravity.

Sharing the same four new wheel design options as the rest of the new Corolla model range, the Sedan will be available with a choice of nine seven body colors, of which one -Celestite Grey Metallic- has been uniquely developed for the new Sedan.

## LONG DESCRIPTION

### Spacious And Refined Interior

- All-new spacious, modern and cohesive interior offering the highest levels of visual and tactile quality
- Ergonomically excellent driver's cockpit area with slimmer dashboard with wider, higher center console
- More engaging driving position and newly developed front seats
- Interior of Touring Sports tailored for European customers with focus on high practicality

The new Corolla model range showcases an all-new interior designed to

create a spacious, modern and cohesive cabin environment in which new textures, colors and trim combine to offer the highest levels of visual and tactile quality.

Key to the Corolla interior's feeling of spaciousness is a new instrument panel design which is 24 mm slimmer overall. The resultant reduction in height of the upper panel area reduces the perceived mass of the panel itself and improves forward visibility whilst still allowing for a lowering of the front seat hip point to lower the vehicle's center of gravity and offer a more engaging driving position.

Conversely, the center console has been made 42 mm wider and 22 mm higher to both improve switchgear and gear lever ergonomics and enhance

## TOYOTA COROLLA HYBRID 2020

---

*the wrap-around feel of the driver's cockpit area. Simultaneously, the center console armrest height has been optimized, and its sliding range increased by 20 mm for greater occupant comfort.*

*To the front, Toyota's Under Priority Catamaran design philosophy has been further evolved. A more striking, two-step execution of the fender front corners flanks the powerfully projecting lower grille, a common design theme of the new Corolla family. The slim upper grille has a more three-dimensional design and connects with the top of the sharply designed headlamps, wrapping around the corners to emphasize the car's low and firmly planted appearance.*

*The rear design mimics the frontal execution through the dynamic shape of the bumper and the inversed trapezoid design of the trunk lid. The sedan-specific rear lamp clusters are connected through a chrome ornamentation strip, further highlighting the model's wide stance.*

*Furthermore, the unique signature of the front and rear LED light guides makes the new Corolla Sedan instantly recognizable.*

*Includes a new driver's instrument binnacle incorporating a new 7" 3D-effect panel or a Multi-information display, an electronic parking brake, a wireless phone charging pad and an electro chromatic rear-view mirror.*

*A revised front seat design features changes to both the seat back and cushion springs and the optimization of urethane pad thickness. In combination, these measures achieve a better driving posture with wider pressure dispersal for enhanced comfort and reduced long-haul fatigue.*

*Rear passenger comfort has been increased through new seat cushion material for the more even distribution of occupant weight over the cushion area and dedicated rear air vents.*

*Sedan models' long wheelbase has allowed for an increase in the front-to-rear seat couple distance of 48 mm to 928 mm, providing best-in-class rear seat passenger legroom.*

*The Corolla's all-new interior design is made even more cohesive and unified in appearance through the use of high visual and tactile quality materials and trim finishes, including satin chrome plating and paint, piano black inserts, and synthetic and genuine leather and stitching.*

*The new Sedan's interior is available with a choice of fabric or partial leather seats in a Black or Beige color scheme, for a more prestigious atmosphere.*

## **SPECIAL FEATURES**

### **New technology highlights include:**

**LED Headlamps:** A range of three, grade-dependent LED front lamp clusters includes a triple LED parabola unit type headlamp, a Bi-Beam LED headlamp with AHB.

### **Color TFT Display with 3D-Effect:**

The driver's meter cluster is equipped with a 7" Multi-information Display offering a choice of digital and analogue speedometer modes. The panel may also be switched to display a 3D-effect, in which the dials appear to float in mid-air.

### **Wireless Mobile Phone Charger:**

A wireless charging system allows vehicle occupants to recharge all Wireless Power Consortium (WPC)-compatible mobile telephones simply by resting them on a dedicated pad located in front of the gearshift lever.

### **Simple Intelligent Park Assist with Automatic Braking (SIPA):**

The system uses a rear camera and ultrasonic sensors on the front side-bumper to identify viable reverse and parallel parking spaces. It will then automatically apply the correct sequence of steering angles for the parking maneuver into the target space; all the driver needs do is control the vehicle's speed. SIPA automatically activates the braking system, ensuring the safety of parking man oeuvre.
